

### Special Deep Drawing Presses - 77/850

Deep Drawing Presses are the main machines used in fields like Automotive, White Appliances and Natural Gas. These type of presses are generally known as 'Double Effect Presses' because they apply the pressure from the up and work with the cushion cylinders from the down.

This process is made by giving shape to sheet metal materials in various thickness and different characteristics (steel, stainless steel, alloy sheet etc.) with high pressure between a male and female mould.

As Hürsan Hydraulic Press and Workbench Ind. Set. CO, ODCP Series we can manufacture 1300\*1600 mm table sizes up to 1600\*1300 mm between 300-4000 tons pressing force.
